UNETsystem has chosen as a Performer in a Strengthen IP Manageability and Internal Network Security Project of NTS, National Tax Service

- Improve the maturity of internal network security management system by implementing of the new IP management and malicious traffic detection & quarantine capabilities

UNETsystem, a leading ubiquitous network security company announced that we has chosen as a performer in a strengthen IP manageability and internal network security project of NTS, National Tax Service, which is a government organization for national tax service in Korea.

The purposes of this project are the strengthening of internal security management system and the standardizing of security process by consolidation of an IP management and an automatic connection control.

The core technologies of this project are the following; the realtime management of IP/MAC address, the malicious traffic detection and quarantine based on realtime traffic monitoring, and the automatic statistics and reports. UNETsystem proposed Anymon PRO, and chosen as a performer.

Anymon PRO is a realtime network behavior analysis solution that collects network traffic information from firewalls, Anymon Sensors, and the other network devices, detects anomaly behaviors includes worms, viruses, and quarantines infected terminals from the network. Only few security vendors have had NBA solution now.

Anymon PRO will be deployed at a Yangpyung-dong data center, a head office, six regional offices, and a hundred and fifteen tax offices national widely, and do the IP management and the traffic analysis on their internal and business networks.

An officer in National Tax Service said that "We started the project for the implementing an IP management, malicious traffic analysis and quarantine capabilities, and make them to be interoperable with enterprise security management system for the future.", and also said, "We expects that Anymon PRO will be our best choice for the project."

To the end of February, UNETsystem will be finished this project.

UNETsystem focus on the strategic business that targeted at governments, finances and large enterprises, and the security integration business that escalates synergy effects followed by integration with network access control and/or enterprise security management technologies. Mr. Ho Jo Yoo, the former sales head at Initech, was joined recently at the company as a managing director for business development.

UNETsystem stood out as a leading vendor from the NAC solution field, and the total sales revenue was eight
